

Manual

Aurélie

Babette

NL:

Open alle dozen en controleer of de inhoud klopt.

Sorteer dan alle onderdelen volgens gebruik, die vermeld staat op de inhoud in de dozen.

De 7 soorten van gebruik zijn :

- Gevel
- Zijwand
- Dak
- Deur
- Dakraam
- Beglazing
- Afwerking

E:

Open all the boxes and make sure the contents is correct.

Sort all parts according to the usage which is mentioned on the contents of the boxes.

The 7 types of usage are :

- Facade
- Side panel
- Roof
- Door
- Skylight
- Glazing
- Finishing

F:

Ouvrez toutes les boîtes et assurez-vous que le contenu est correct.

Triez toutes les parties conformément à l'utilisation indiquée sur le contenu des boîtes.

Les 7 types d'utilisation sont :

- Façade
- Parois
- Toit
- Porte
- Lucarne
- Vitrage
- Finition

D:

Öffnen Sie alle Boxen und kontrollieren Sie dass der Inhalt richtig ist.

Sortieren Sie alle Teile nach der Anwendung, die auf dem Inhalt der Boxen angegeben wird.

Die 7 Arten der Anwendung sind :

- Façade
- Parois
- Toit
- Porte
- Lucarne
- Vitrage
- Finition

Beste klant

Proficiat met de aankoop van uw serre. Door deze handleiding is geen technische voorkennis vereist. Doorneem alles stap per stap, zodat noodzakelijke onderdelen en handelingen voorbereid zijn.

Veiligheid en efficiëntie

Glas is zwaar, scherp en breekbaar. Een ladder is hoog en wankel. Aluminiumprofielen zijn soms lang en scherp. Wees voorzichtig als u niet dagelijks met deze grondstoffen werkt, kinderen blijven daarom beter uit de buurt. Veiligheidsschoenen, een veiligheidsbril en handschoenen kunnen hierbij helpen, bij de montage van glas zijn deze een must.

Gereedschappen:

- 2 sleutels met sleutelwijdte 10mm
- mes of een stevige schaar
- sterschroevendraaiër (groot type)
- platte schroevendraaiër (groot)
- waterpas
- spade
- touw of een meter van min. 5 meter
- ladder (die op zichzelf kan blijven staan)

Toebehoren verkrijgbaar in elke doe-het-zelf winkel:

- sneldrogende beton, om uw serre vast te ankeren
- Neutrale silicone.

Handeling voorafgaand aan de montage

Pak alle dozen uit en sorteer de onderdelen volgens gebruik (zie inhoudsblad per doos).

Weetjes

- Boutgleuven zijn gleuven waar de kop van een bout in past. Bijna elk profiel in deze serre bezit 1 of meerdere boutgleuven.
- Bij verbindingen met boutgleuven, steeds de profielen goed tegen elkaar drukken.
- Wachtbouten zijn bouten die we in een gleuf schuiven als voorbereiding voor een latere montage, op een tiental centimeter van het profieleinde houden moeren ze voorlopig vast.
- Een serre bestaat uit 2 gevels, 2 zijwanden en 1 dak.
- Indien niet specifiek vermeld, worden steeds korte bouten (M6x10) gebruikt.
- Mogelijke blauwe bol/aanduiding op het profiel verwijst naar het linkse profiel. Mogelijke rode bol/aanduiding op het profiel verwijst naar het rechtse profiel. Het linkse profiel bevindt zich aan de linkerkant als u van buitenaf kijkt naar de serre/kas. Het rechtse profiel bevindt zich aan de rechterkant als u van buitenaf kijkt naar de serre/kas.

Advies

Gebruik steeds alle detailzichten als hulpmiddel voor het uitlijnen, uitrichten en positioneren van uw profiel. Let op doorsnede en gaten. De moeren enkel 2 toertjes op de bouten draaien, pas na het doorlopen van de volledige pagina de bouten en moeren definitief aanspannen.

Bijkomend advies en tips

- Verzekering: Het is aan te bevelen uw verzekeringsmakelaar in te lichten van de plaatsing van uw serre.
- Regelmatig controleren:
 - Controleer of alle bouten nog zijn aangespannen
 - Controleer of uw verankering (beton en de ankers) nog steeds intact is
 - Controleer de positie van het dakraam
- Extra controle bij heel slecht weer:
 - Zorg ervoor dat de opsteker van het dakraam in het slotgat vast zit en zo het dakraam goed vastklemt.
 - Zorg ervoor dat de deur goed dicht is, vergrendel de deur indien mogelijk
 - Zorg ervoor dat er geen luchtspleten zijn onder de fundering
 - Verhinder een te groot sneeuwgewicht
- Algemene regel: Zorg ervoor dat de wind niet in uw serre kan
- Tips voor de goede werking van uw serre:
 - Reinig met regelmaat de goten
 - Reinig met regelmaat de condensgoten
 - Reinig de onderloopregel van de deur voor een vrije loop van uw deur
 - Voor de goeie werking van uw deur, olie de wielen regelmatig in
 - Reinig uw glas
- Bij het gebruik van silicone raden wij aan 'silirub PC' te gebruiken. De aangebrachte silicone heeft een levensduur van 1 jaar en wordt best regelmatig vervangen (hiervoor kunt u 'sealant remover' gebruiken). Het is heel belangrijk dat de silicone in de juiste omstandigheden wordt aangebracht:
 - Bij droog weer
 - In normale temperaturen (geen extreme koude of warmte)
 - Op ontvette ondergrond (eventueel 'cleaner & degreaser' gebruiken)
 - 1 dag laten uitdrogen
- De automatische raamopener: tijdens de winter de cilinder verwijderen, in te oliën en op een warme plaats bewaren. Je kan steeds gebruik maken van de manuele opener. Gebruik automatische raamopener en manuele opener niet samen.

Chèr(e) client(e)

Félicitations pour l'achat de votre serre. Grâce au présent manuel, aucune connaissance technique préalable n'est requise pour le montage. Suivez les différentes étapes afin de préparer les différents éléments et d'opérer les manipulations nécessaires.

Sécurité et efficacité

Attention ! Les profils en aluminium sont parfois longs et coupants. Tenez également compte de la hauteur et de la mauvaise stabilité de l'échelle. Soyez donc prudent si vous n'utilisez pas régulièrement ce genre de matériel ; gardez de préférence les enfants à distance. Chaussures de sécurité, lunettes de sécurité et gants peuvent être utiles et sont indispensables pour le placement du verre.

Outils:

- 2 clés de 10 mm
- un couteau ou des grands ciseaux
- un tournevis étoile (de grande taille)
- un tournevis plat (grand)
- un niveau
- une bêche
- une corde ou un mètre de min. 5 mètres
- une échelle (qui peut tenir seule)

Matériaux disponibles dans tous les magasins de bricolage:

- béton à prise rapide pour ancrer solidement votre serre
- Silicone neutre.

Action avant le montage

Ouvrez toutes les boîtes et triez les parties conformément à l'utilisation comme indiquée sur le contenu des boîtes.

Bon à savoir

- Les rainures à boulon sont des rainures dans lesquelles s'adapte la tête d'un boulon. Quasiment tous les profils de cette serre possèdent 1 ou plusieurs rainure(s) à boulon.
- En cas de raccords via les rainures à boulon, toujours bien comprimer les profils l'un contre l'autre.
- Les boulons d'arrêt sont des boulons à glisser dans une rainure, en préparation d'un montage ultérieur ; des écrous les tiennent en place à une dizaine de centimètres de l'extrémité du profil.
- Une serre se compose de 2 façades, de 2 parois latérales et d'un toit.
- Sauf mention spécifique, on utilise toujours des boulons courts (M6x10).
- L'éventuelle indication bleue sur le profil fait référence au profil de gauche. L'éventuelle indication rouge sur le profil fait référence au profil de droite. Le profilé de gauche se trouvera sur le côté gauche lorsque l'on regarde la serre de l'extérieur. Le profilé de droite se trouvera sur le côté droit lorsque l'on regarde la serre de l'extérieur.

Conseil

Utilisez toujours toutes les vues détaillées comme aide pour aligner, centrer et positionner votre profil. Soyez attentif à la section et aux perforations. Lorsque vous vissez les écrous sur les boulons, ne faites que 2 tours ; ne serrez définitivement les écrous sur les boulons qu'après avoir pris connaissance de la page dans son intégralité.

Conseils et astuces supplémentaires

- Assurance : il est recommandé d'avertir votre compagnie d'assurance que vous avez monté une serre
- Contrôles réguliers:
 - Vérifiez que tous les boulons soient bien serrés
 - Assurez-vous que l'ancrage (béton + portants) est intact
 - Contrôlez la position de la tabatière
- Contrôles supplémentaires en cas de mauvaises conditions météo:
 - Assurez-vous que le loquet de la tabatière soit bien dans l'orifice de fermeture et que la tabatière soit correctement fermée
 - Assurez-vous que la porte soit bien fermée ; verrouillez-la si nécessaire
 - Assurez-vous de l'absence de fissures dans l'embase
 - Evacuez l'excès de neige pour éviter trop de poids
- Règle générale : veillez à éviter que le vent ne puisse pénétrer dans la serre
- Conseils pour le bon fonctionnement de votre serre:
 - Nettoyez régulièrement les gouttières
 - Nettoyez régulièrement les rainures de condensation
 - Nettoyez la rainure d'évacuation de la porte pour permettre une ouverture aisée
 - Pour un actionnement optimal de la porte, lubrifiez régulièrement les roulettes
 - Nettoyez les vitres
- Nous vous recommandons d'utiliser du silicone "silirub PC". Le silicone appliqué sur les parties a une durée de vie de 1 an et il est préférable de le remplacer régulièrement (vous pouvez utiliser un "dissolvant de mastic" pour cela). Il est très important que le silicone soit appliqué dans les bonnes conditions:
 - par temps sec
 - à des températures normales (pas de froid extrême ni de chaleur)
 - Sur des surfaces dégraissées (éventuellement utiliser "nettoyant & dégraissant")
 - Laisser sécher pendant 1 jour
- L'ouverture automatique de la fenêtre : l'hiver, ôtez les cylindres, lubrifiez-les et conservez-les dans un endroit chaud. Vous pouvez toujours ouvrir manuellement. N'utilisez pas les dispositifs d'ouverture automatique et manuelle en même temps.

Dear Customer

Congratulations on the purchase of your greenhouse. Thanks to this manual, no technical foreknowledge is required for assembling the greenhouse. Reading through the manual step by step will allow you to prepare all necessary parts and acts for the assembly of your greenhouse.

Safety and Efficiency

Glass is heavy, sharp-edged and fragile. A ladder is high and unstable. Aluminium profiles are sometimes long and sharp-edged. So, be careful when you are not familiar with handling these materials. Therefore, it is better to keep children away during the assembly. Safety shoes, safety glasses and safety gloves may therefore be very useful and are essential when assembling glass.

Tools:

- 2x 10mm screw-wrenches
- Knife or solid scissors
- Star screwdriver (large type)
- Flat screw-driver (large type)
- Spirit level
- Shovel
- Rope or measuring rod min. 7 meters
- Ladder (self-standing)

Tools available in all D.I.Y.-shops:

- Quick-drying concrete to solidly anchor your greenhouse
- Neutral silicone.

Actions prior to assembly

Open all the boxes and sort all parts according to the usage which is mentioned on the contents of boxes.

Petty Facts

- Bolt slots are slots in which fits a bolt head. Nearly all profiles in this greenhouse have 1 or more bolt slots.
- In the event of bolt slot connections, always make sure that the profiles are closely pressed to one another.
- Stop bolts are bolts that we slide in a slot in preparation of further assembly; these bolts are temporarily retained by nuts at some 10cm of the profile end.
- A greenhouse consists of 2 façades (front and back), 2 sidewalls and a roof.
- Except when explicitly mentioned otherwise, short bolts (M6X10) are used.
- The possible blue indication on the profile refers to the left-hand profile. The possible red indication on the profile refers to the right-hand profile. The left-hand profile will be on the left-hand side if you look at the greenhouse from the outside. The right-hand profile will be on the right-hand side when looking at the greenhouse from the outside.

Advice

Always use all detailed views as aid to align, line up and position your profile. Pay attention to section and perforations.

When fixing the nuts on the bolts, only make 2 turns; only definitively tighten the bolts and nuts after having gone through the entire page.

Additional Advice and Tips

- Insurance: it is recommended to inform your insurance broker on the installation of your greenhouse.
- Regularly check:
 - whether all bolts are still tightened
 - whether the anchors (concrete and anchors) are still intact
 - the position of the roof window
- Extra checks in times of bad weather:
 - Make sure that the window-raiser is locked in the hole and firmly clamps the roof window
 - Make sure that the door is firmly closed; if possible, lock it
 - Make sure there are no air splits under the foundation
 - During winter, remove snow from the greenhouse (weight)
- General rule: Make sure that the wind cannot enter your greenhouse
- Tips for a good functioning of your greenhouse:
 - Regularly clean the gutters
 - Regularly clean the condensation water gutters
 - Clean the door threshold profile for smooth functioning of the door
 - Regularly oil the wheels of the door for a smooth functioning
 - Clean the glass
- In case of usage of silicone, we recommend using "silirub PC". The silicone applied on the parts has a lifespan of 1 year and is best replaced regularly (you can use "sealant remover" for this). It is very important that the silicone is applied in the right conditions:
 - In dry weather
 - In normal temperatures (no extreme cold or heat)
 - On defatted surfaces (possibly use "cleaner & degreaser")
 - Allow to dry out for 1 day
- Automatic window-raiser: during the winter period, remove the cylinder, oil it and store it in a warm place. You can always use the manual window-raiser. Do not use the automatic window-raiser and the manual window-raiser together.

Sehr geehrter Kunde

Herzlichen Glückwunsch zu Ihrem neuen Gewächshaus! Diese Anleitung setzt keine technischen Vorkenntnisse voraus. Gehen Sie alles Schritt für Schritt durch, damit alle erforderlichen Teile in Reichweite liegen und Sie auf den nächsten Arbeitsschritt vorbereitet sind.

Sicherheit und Effizienz

Glas ist schwer, scharfkantig und zerbrechlich. Eine Leiter ist hoch und wacklig. Aluprofile sind manchmal lang und ebenfalls scharfkantig. Seien Sie vorsichtig, wenn Sie nicht täglich mit solchen Dingen arbeiten. Kinder sollten auf Abstand bleiben. Sicherheitsschuhe, eine Schutzbrille und Handschuhe können hilfreich sein. Beim Einsetzen von Glas sind sie sogar unverzichtbar.

Arbeitsmittel:

- 2 Schlüssel mit 10 mm Schlüsselweite
- ein Messer oder eine robuste Schere
- Kreuzschraubendreher (groß)
- Schlitzschraubendreher (groß)
- Wasserwaage
- Spaten
- Seil oder Maßband mit einer Länge von mindestens 7 Metern
- Stehleiter

Zubehör, das Sie in jedem Baumarkt finden:

- schnellhärtender Beton für die Verankerung Ihres Gewächshauses
- Neutrales Silikon.

Aktionen vor der Montage

Öffnen Sie alle Boxen und sortieren Sie alle Teile entsprechend der Verwendung, die auf dem Inhalt der Boxen angegeben ist.

Petty Facts

- Schraubennuten sind Nuten, in die der Kopf einer Schraube passt. Nahezu jedes Profil dieses Gewächshauses hat 1 oder mehrere Schraubennuten.
- Bei Nutverbindungen müssen die Profile immer fest aneinander gedrückt werden.
- Warteschrauben sind Schrauben, die man zur Vorbereitung der späteren Montage in eine Nut schiebt. Sie werden in etwa 10 cm Abstand zum Profilende provisorisch durch Muttern festgehalten.
- Das Gewächshaus besteht aus 2 Giebelwänden, 2 Seitenwänden und 1 Dach.
- Soweit dies nicht anders angegeben ist, werden stets kurze Schrauben (M6x10) verwendet.
- Die mögliche blaue Andeutung auf dem Profil bezieht sich auf das linke Profil. Die mögliche rote Andeutung auf dem Profil bezieht sich auf das rechte Profil. Das linke Profil befindet sich auf der linken Seite, wenn Sie das Gewächshaus von außen betrachten. Das rechte Profil befindet sich auf der rechten Seite, wenn Sie das Gewächshaus von außen betrachten.

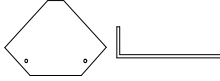

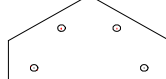

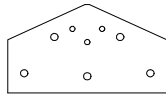

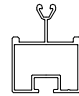

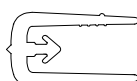

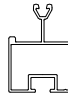

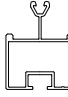

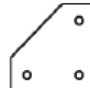

Tipp

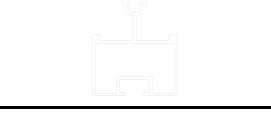

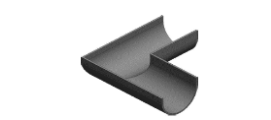

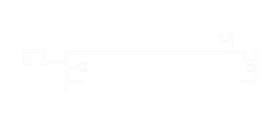

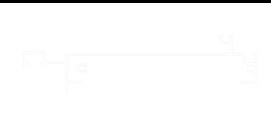

Benutzen Sie immer alle Detailansichten als Hilfsmittel für die Fluchtung, Ausrichtung und Positionierung der Profile. Beachten Sie den Querschnitt und die Bohrungen. Die Muttern dürfen nur zwei Umdrehungen weit auf die Schrauben gedreht werden. Erst nachdem die ganze Seite mit Schrauben bestückt ist, werden alle Schrauben und Muttern endgültig festgezogen.

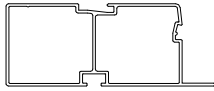

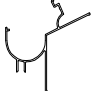

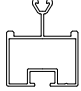

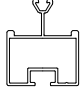

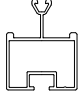

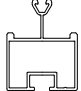

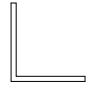

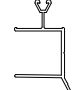

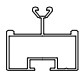

Weitere Hinweise und Tipps

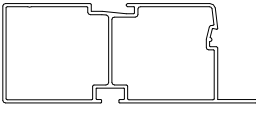

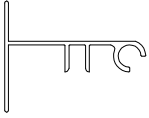

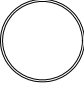

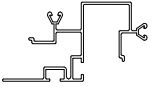

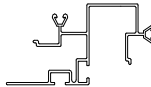

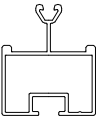

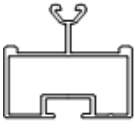

- Versicherung: Es empfiehlt sich, Ihrem Versicherungsvertreter zu melden, dass Sie ein Gewächshaus besitzen.
- Regelmäßige Kontrollen:
 - Kontrollieren Sie, ob alle Schrauben noch festgezogen sind
 - Kontrollieren Sie, ob Ihre Verankerung (Beton und Anker) noch intakt ist
 - Kontrollieren Sie die Stellung des Dachfensters
- Zusätzliche Kontrollen bei besonders schlechtem Wetter:
 - Stellen Sie sicher, dass der Öffner des Dachfensters im Schloss arretiert ist und das Dachfenster sicher fest sitzt
 - Stellen Sie sicher, dass die Tür richtig geschlossen ist, und verriegeln Sie möglichst die Tür
 - Stellen Sie sicher, dass unter dem Fundament keine Hohlräume entstanden sind
 - Verhindern Sie eine zu hohe Belastung durch aufliegenden Schnee
- Allgemeine Regel: Stellen Sie sicher, dass kein Wind in Ihr Gewächshaus eindringen kann.
- Tipps zur einwandfreien Funktion Ihres Gewächshauses:
 - Reinigen Sie regelmäßig die Rinnen
 - Reinigen Sie regelmäßig die Kondensrinnen
 - Reinigen Sie die untere Türführung, damit die Tür sich problemlos öffnen und schließen lässt
 - Damit sich die Tür problemlos öffnen und schließen lässt, sollten die Räder regelmäßig geölt werden
 - Reinigen Sie die Scheiben
- Verwendung von Silikon: Wir empfehlen die Verwendung von "silirub PC". Das Silikon hat eine Lebensdauer von 1 Jahr und wird am besten regelmäßig ausgetauscht (hierfür können Sie den "Sealant Remover" verwenden). Es ist sehr wichtig, dass das Silikon unter den richtigen Bedingungen angewendet wird:
 - Bei trockenem Wetter
 - Bei normalen Temperaturen (keine extreme Kälte oder Hitze)
 - Auf entfetteten Oberflächen (evtl. "Reiniger & Entfetter" verwenden)
 - 1 Tag trocknen lassen
- Automatischer Fensteröffner: Entfernen Sie im Winter den Zylinder, um ihn zu ölen und an einem warmen Ort aufzubewahren. Sie können dann den manuellen Öffner benutzen. In keinem Fall dürfen Sie den automatischen und den manuellen Fensteröffner zusammen benutzen.

Before mounting the highlighted glasslines make sure you fit one extra stop bolt on the glasslines!

Use M6x10.

This is a preparation for the reinforcement triangles (see page 18-B).

Instructions attachment of door handles

Instructies aanbrengen handvaten / Instructions pour installer poignées

De instructies voor het aanbrengen van het handvat op de glazen deur dienen consequent, stap voor stap uitgevoerd te worden zoals hier aangegeven. Het handvat en systeem van hechting is getest, heeft zijn dienst bewezen bij correct aanbrengen en is reeds vele jaren een standaard onderdeel van de serre.

ACD geeft geen enkele gratis vervanging van het handvat indien deze alsnog zou loskomen van het deurglas.

Les instructions pour l'application des poignées sur la porte en verre doivent être effectuées de manière cohérente, comme indiqué ici. Les poignées et le système d'adhérence ont été testés et ont prouvé leur utilité lorsqu'ils sont appliqués correctement et font partie intégrante de la serre depuis de nombreuses années.

ACD ne fournit pas de remplacement gratuit des poignées si elles venaient toujours à se détacher de la vitre de la porte.

The instructions for applying the handles to the glass door must be carried out consistently step by step as indicated here. The handles and system of adhesion has been tested, has proven its usefulness when applied correctly and has been a standard part of the greenhouse for many years.

ACD does not provide any free replacement of the handles if it should still come loose from the door glass.

Enkel kleven in:

- Droge, niet vochtige omgeving
- Stofvrije zone
- Temperatuur 15 - 25°C

Il faut coller:

- Environnement sec et non humide
- Zone sans poussière
- Température 15 - 25°C

Only stick in:

- Dry, non-humid environment
- Dust-free zone
- Temperature 15 - 25°C

Benodigheden

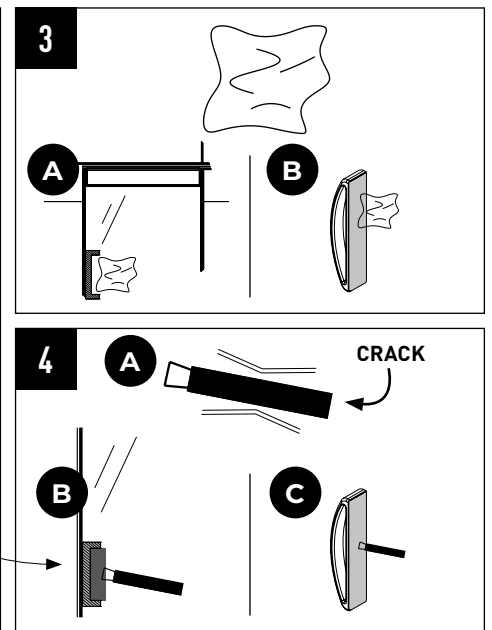

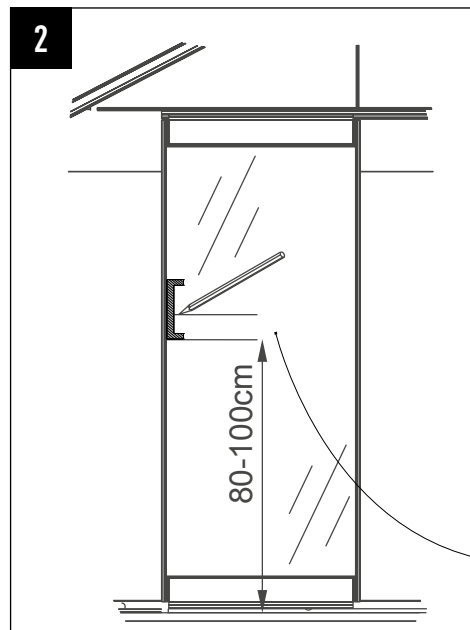

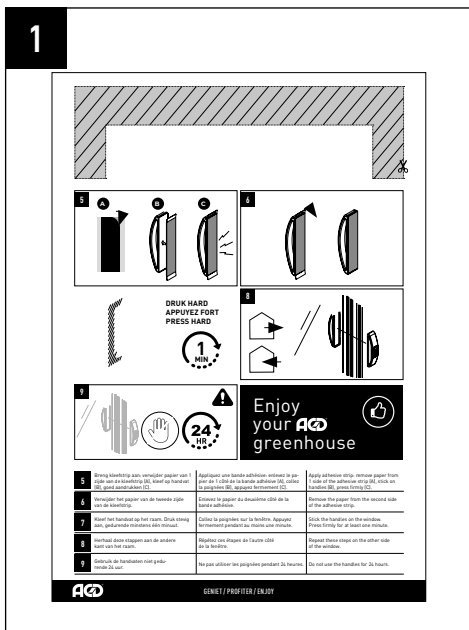

- 2x handvaten 
- 1x primer 
- 1x oppervlaktereinigser 
- 2x kleefstrip 
- 1x sjabloon (knip uit) 

Les nécessités

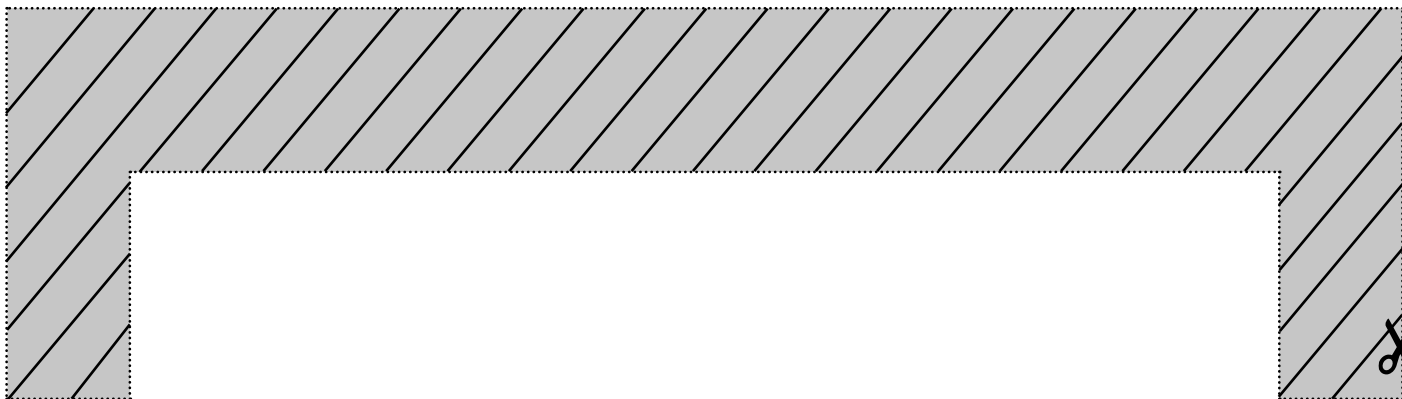

- 2x poignées 
- 1x amorce 
- 1x nettoyant de surface 
- 2x bande adhésive 
- 1x gabarit (découpé) 

Necessities

- 2x handles 
- 1x primer 
- 1x surface cleaner 
- 2x adhesive strip 
- 1x template (cut out) 

1	Knip het sjabloon op de achterkant van deze pagina uit.	Découpez le gabarit au dos de cette page.	Cut out the template on the back of this page.	
2	Meet de hoogte van gewenste positie van het handvat (tussen 80-100 cm vanaf de ondergrond)	Mesurer la hauteur de la position souhaitée de la poignées (entre 80-100 cm de la surface).	Measure the height of the desired position of the handles (between 80-100 cm from the surface).	
3	Ontvet het glas (A) en het handvat (B) met de oppervlaktereinigser.	Dégraissez la vitre (A) et la poignées (B) avec le nettoyant pour surfaces.	Degrease the glass (A) and the handles (B) with the surface cleaner.	
4	Breek de primer (A) en breng het aan op het glas (B) en het handvat (C).	Casser l'apprêt (A) et l'appliquer sur le verre (B) et la poignée (C).	Break the primer (A) and apply it to the glass (B) and the handles (C).
